Renewal (Odnowa) is a series of initiatives aiming to improve the shared spaces of the “Wolska triangle” area. We are dedicated to user comfort and accessibility of public space. The project is run by the Na Miejscu Foundation in partnership with Wola District Council, the Skanska company and the Project for Public Spaces.

1. **stabilizing common areas**
   A program to organize and beautify the public spaces (i.e. placemaking) between the SPARK buildings and their general vicinity. In the plans is an idea for rooftop beehives and open-air work space near the office buildings.

2. **accessible space**
   The Na Miejscu Foundation partnered with the Intergracja Foundation to perform AUDITS of the SPARK office buildings’ and their surroundings’ accessibility to people with disabilities, seniors and families with children. The recommendations to remove physical barriers were integrated into the designs and published. One of the outcomes was the decision to eliminate the non-accessible underground walkway at Młynarska street.

3. **outdoor work space**
   We tested the possibilities for co-working spaces in open air. The arising work space between the SPARK buildings will incorporate recommendations submitted by potential users.

4. **“how do you like it here?”**
   We surveyed local residents about living in the “Wolska triangle” area. We asked about the pros and cons of this part of town and for some initial ideas to make it better. The information gathered served as the basis for a neighborhood action program.

5. **consultations on the area of the PDT department store**
   Interviews with residents about quality of life in the area. An architectural concept was developed on the basis of the interview findings.

6. **workshops: greenery in the colony**
   A series of workshops with Wawelberg Colony residents led to the development of a comprehensive greenery concept for the subdivision. The concept was submitted as a local project proposal to Wola District Council and is a starting point for further resident initiatives.

7. **“new venice” architectural concept**
   With input from residents, a modernization concept was devised for the square outside of the PDT department store on Młynarska street. The concept aims to restore “Venice” square to its former glory, giving the spot a chance to become of local center for the residents of Mirów and Młynów.

8. **“neighborhood hut”**
   A “neighborhood hut” appeared on Młynarska street. The children’s play cabin was made possible by the efforts of local residents.

9. **Buy local**
   An initiative to support local retail and services. It promoted the idea of doing your shopping in Wola with a month-long buy-local campaign and a system of discounts.

10. **green spaces at Wawelberg colony**
    A series of initiatives aimed at turning the green spaces of the Wawelberg colony into accessible and attractive public spaces. Workshops with residents led to the development of a comprehensive greenery concept for the colony. The concept was submitted as a local project proposal to Wola District Council and is a starting point for further resident initiatives.

11. **“story shed”**
    At KERCELAK roundabout, we concentrated on local residents’ personal stories about living in Wola district. The stories people shared were recorded in the story shed.
